LinkedIn: www.linkedin.com/in/mateusz-wasalski/

MBA in Technology Leadership, Digital Transformation and AI student @ Akademia Leona Koźmińskiego

Data Engineering skills:

- **Data Engineering:** Azure Databricks, Snowflake, Azure Data Factory
- **Programming & Tools:** Python, SQL, PySpark
- **DevOps & Automation:** Azure DevOps (CI/CD pipelines, Git), Logic Apps, Power Automate
- **Data Visualization:** Power BI
- **Methodologies:** Agile, Lean Management

Working experience:

03.2025 – present

Senior Cloud Data Engineer @ SoftwareMind

Interview Data Engineering candidates and contribute to hiring decisions.

Own end-to-end data pipelines on a Databricks medallion lakehouse (bronze/silver/gold Delta):

Engineering metrics (C-level):

- Fetch data from Jira, Checkmarx, and Azure DevOps via custom Python API connectors;
- Ingest daily raw files with Auto Loader;
- Orchestrate with Databricks Jobs;
- Serve to Power BI;
- Deployed across dev and prod via Databricks Asset Bundles (IaC)

Project-management metrics (C-level + Head of Scrum Masters):

- Jira-based product surfacing task status, risk, and story points per sprint;
- Cut data-analysis time **~75%** and removed manual reporting overhead;
- Created data-product: Genie chatbot to 'talk' with Jira's data thanks to which Scrum Masters and Project Managers can easily create aggregations, summaries, charts and POC around Sprints and Boards data from Jira and make improvements in given team performance

Recreated financial reporting for external clients from Dynamics 365 project data (via Delta Share):

- Pre-joined three tables into one wide Delta table to fit GoodData's live (uncached) connection, cutting **~\$400/week** in compute.

Contribute to the internal Data & AI guild as a speaker on Make, Snowflake, and Databricks.

10.2024 – 03.2025

Data Engineer @ AngryNerds

Owned end-to-end pipelines on Azure Synapse Analytics powering a scalable system to optimize license costs.

- Migrated transformation logic out of Power BI (Power Query) into Azure Synapse, pushing ETL upstream from the BI layer to the platform layer for reusability and version control.
- Built Git-integrated Synapse workspaces so all pipeline and dataset logic was versioned as JSON, enabling the .NET team to package and ship it as an installable, purchasable Microsoft Store app.
- Engineered the data pipelines behind a Microsoft 365 **license-optimization recommender** - connecting to Azure to surface unused/redundant licenses clients could disable to cut spending.
- Partnered with .NET developers to build repeatable, parameterized Synapse environments.

2023-07 -2024-10

Data Engineer @ Etteplan

Owned end-to-end data pipelines on Azure Data Factory for a client in the energy sector.

- Developed and optimized ADF pipelines and Python scripts for efficient ETL transformations.
- Automated file extraction and processing via Logic Apps and Power Automate, removing manual operational steps.
- Organized data in Azure Blob Storage with a [raw/curated folder structure + date partitioning / lifecycle policies] for efficient downstream access.
- Built a Power BI report for C-level management to track energy generation and usage.

2023-01 - 2023-06

BI Developer @ Sanhua-Aweco

Hired as the first BI developer to lay the foundations for a new BI team.

- Built a Power BI report that cut bill-of-materials (BOM) calculation from ~2 hours manual work to ~5 seconds automated calculations per item, freeing 4+ hours daily for the controlling department.
- Acted as a data advocate, educating business owners on data-driven decision-making.

2022-02 - 2022-12

Data Analyst / Power BI Developer @ ZF Group

Built Power BI dashboards for the Project Management department

- Used **Databricks**, **PySpark**, and **SQL** to extract and transform large datasets from **Azure Blob Storage**.
- Built Power BI dashboards tracking the department's key business KPIs.
- Turned analytical findings into clear recommendations for senior stakeholders.

Education:

2026 – 2028 - MBA in Technology Leadership, Digital Transformation, and AI @ Akademia Leona Koźmińskiego

2022 - **Business Intelligence**, Post-graduate @ Warsaw University of Technology

2021 - **Data Science**, Post-graduate @ AGH University of Science and Technology

2020 - **Lean Management**, Post-graduate @ Wroclaw University of Economics and Business

2018 - **Economics**, Bachelor degree @ University of Economics in Katowice

Certificates:

2026-03 - Databricks Data Engineer Associate

2024-03 - Machine Learning Mastery by COGITA

2018-09 - AgilePM® Foundation
